- Ability to articulate and quickly adapt to development **best practices** in industry.
- Proficient in **project planning** and immensely worked with clients from USA, UK, and Asia Pacific regions, in providing Insights and building mobile & web applications for our end-clients.

PROJECT EXPERIENCE

Wells Fargo, Hyderabad   **July 2019 – January 2021**

Project: Calculation Services - Web Application for Forecasting 'Current Expected Credit Losses' (**CECL**) and Comprehensive Capital Analysis and Review (**CCAR**)

Description: We are developing a Single-Page Web Application for our Wells Fargo Bank which will facilitate the Bank's business portfolio such as Cards, Mortgage, Auto and Home Lending models. By providing a statistical input to the appropriate model, this application can perform scenario based analysis on current market trend and forecast the risk associated with the loans for the Bank.

This application is built using ReactJS as a Front-End Framework, DJango & Python as a Middleware for RESTful API's service and Oracle Database for storing data records.

Responsibilities:

- Gathering Business Requirement, Engage in UX Design approvals, set timelines, documentation and addressing SCRUM Calls with on-shore Clients.
- Script User Interface Components using Front End Technologies and React Framework.
- Deploy and Test on multiple web browsers and servers (DEV, SIT, UAT, and PROD) with quality assurance.
- Project integration, support and maintenance using Jenkins for CICD.

Technical Tools: ReactJS, Redux, NodeJS, JavaScript, BootStrap4, DJango REST API, HTML 5, CSS3, jQuery, YAML, JSON, Oracle Database, Visual Studio Code, Git/ GitHub, Jenkins, JIRA, Amazon Cloud Service.

KANTAR, Hyderabad   **September 2014 – October 2018**

Project: British American Tobacco – Multi country project (USA/ Australia/ South Africa)

Description: This is a smoking dairy project, related to a popular brand British American Tobacco which people use for smoking. The intent of this study is to collect the intervals of daily smoking practice of tobacco and vaping products.

Responsibilities:

- Building responsive web design user interfaces pertaining each region
- Scripting the web based survey using above mentioned technologies
- Testing on local web browsers and server machines for quality assurance
- Data Analysis and manipulation using SQL commands, in order to export Excel reports and tabulate data in the form of tables and charts

Technical Tools: ReactJS, Redux, JavaScript, NodeJS, Bootstrap, HTML5, CSS3, JQuery, SQL, VS Code, Git/ GitHub

KANTAR, Hyderabad   **February 2013 – October 2014**

Project: QMob App – LumiSay (Android/IOS)

Description: This is our organizations own App which is used to conduct survey and capture responses in certain regions around the globe. We script and deploy the program survey for various brands, and some of our major clients are Diageo, AT&T and Millward Brown.

Responsibilities:

- Design the user interface to match the theme of the brand, logos and also cater new ideas to the client
- Initiating the project specification, timelines and documentation over the call with clients
- Script the program with reference to the requirements listed in the questionnaire documents
- Testing on locally on Mobile, Tablet, and Web browsers for quality assurance
- Project integration, hosting and maintenance
- Perform data analysis such as extraction, manipulation and tabulation

Technical Tools: JavaScript, HTML 5.0, CSS3, jQuery, SQL Workbench, LumiSay Dashboard, Visual Studio Code, Git/ GitHub, Microsoft Excel, PowerPoint
